(54) Title: **LOAD FLOOR SYSTEM**

(57) Abstract: A load floor system (10) for a vehicle with a seat assembly, a structural member under the seat assembly, and a floor space adjacent the seat assembly. The load floor system (10) includes a retractable panel coupled to the structural member, a first link coupled to the retractable panel, and a second link coupled to the retractable panel (14). The retractable panel (14), the first link, and the second link cooperate as a portion of a four-bar mechanism to translate the retractable panel from a retracted position under the seat assembly to an extended position over the floor space thereby forming a load floor (38).
